FALSE EXIT

A liminal horror chase through fake exits, shifting hazards, and collapsing floors

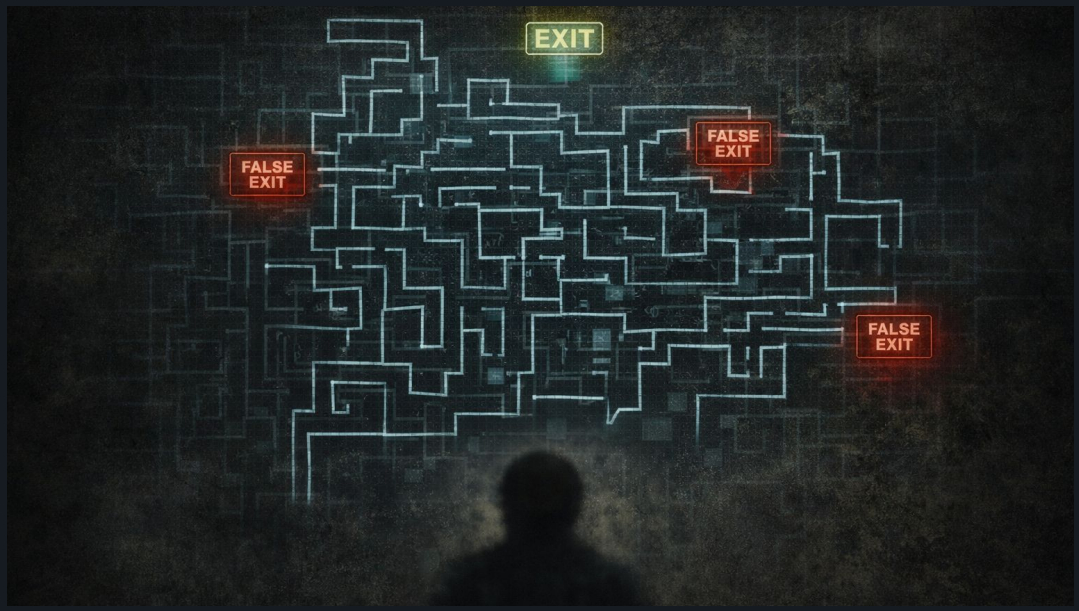
GAME PROPOSAL PITCH

HIGH CONCEPT

A survival-horror prototype built around one idea: the exit is never trustworthy.

The player wakes inside a hostile maze and must keep moving while a monster closes in. Dynamic obstacles force dodges, fake exits waste precious seconds, and surviving Level 1 unlocks a harsher second level built around unstable floors.

- Genre: first-person survival horror
- Player fantasy: escape by reading danger under pressure
- Structure: chase maze → breaking floor finale



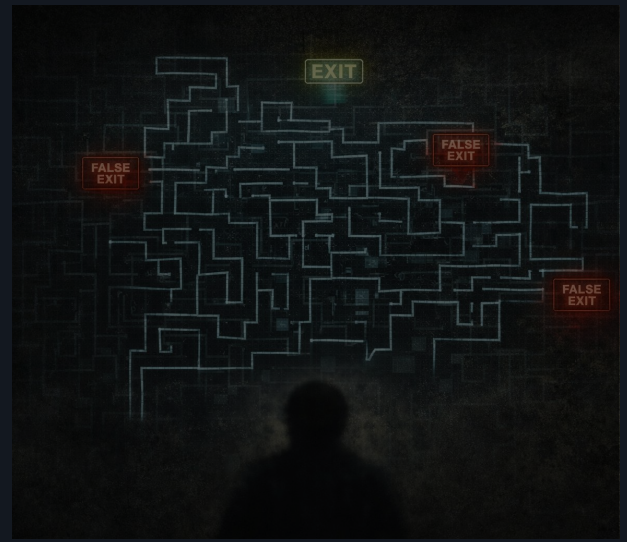
False exits, pursuit pressure, and environmental danger define the full experience.

CORE PILLARS

Three design pillars keep every second tense and readable.

Relentless Pursuit

The threat is always close enough to force movement and panic.



Deceptive Navigation

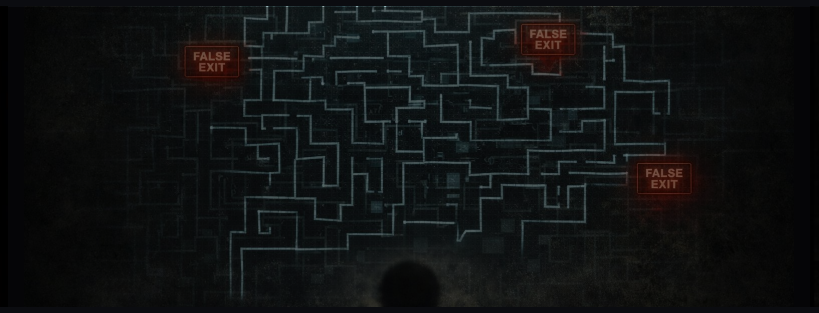
The maze lies to the player with false exits and misleading routes.

Unstable Footing

Movement itself becomes a risk through shifting and collapsing surfaces.

GAMEPLAY LOOP

Pressure comes from movement, misdirection, and escalating risk.



1

Enter the maze

See the threat
and start moving

2

Dodge hazards

Avoid moving,
falling, and rising obstacles

3

Read the exits

Identify the true
route before time runs out

4

Level shifts

The correct exit sends
you into a harsher space

5

Cross the floor

Precision replaces speed
in the final test

LEVEL 1

“Run for Your Life”

A sprint through a fake-exit labyrinth while the monster turns every hesitation into danger.

- Corridor maze with many convincing but wrong exits
- Obstacle beats: doors, falling debris, rising blockers, moving objects
- The chase enemy forces fast decision-making instead of careful exploration
- The correct exit becomes the gateway to Level 2

Key emotion: panic with just enough clarity to act

LEVEL 2

“Breaking Floor”

The pace changes: survival now depends on choosing where to step before the surface betrays you.

- Some tiles crack and collapse after contact
- Others flip, shift, or misalign to break the safe path
- The player trades raw speed for precision under stress
- One wrong step means a fall, death, and restart

Escalation

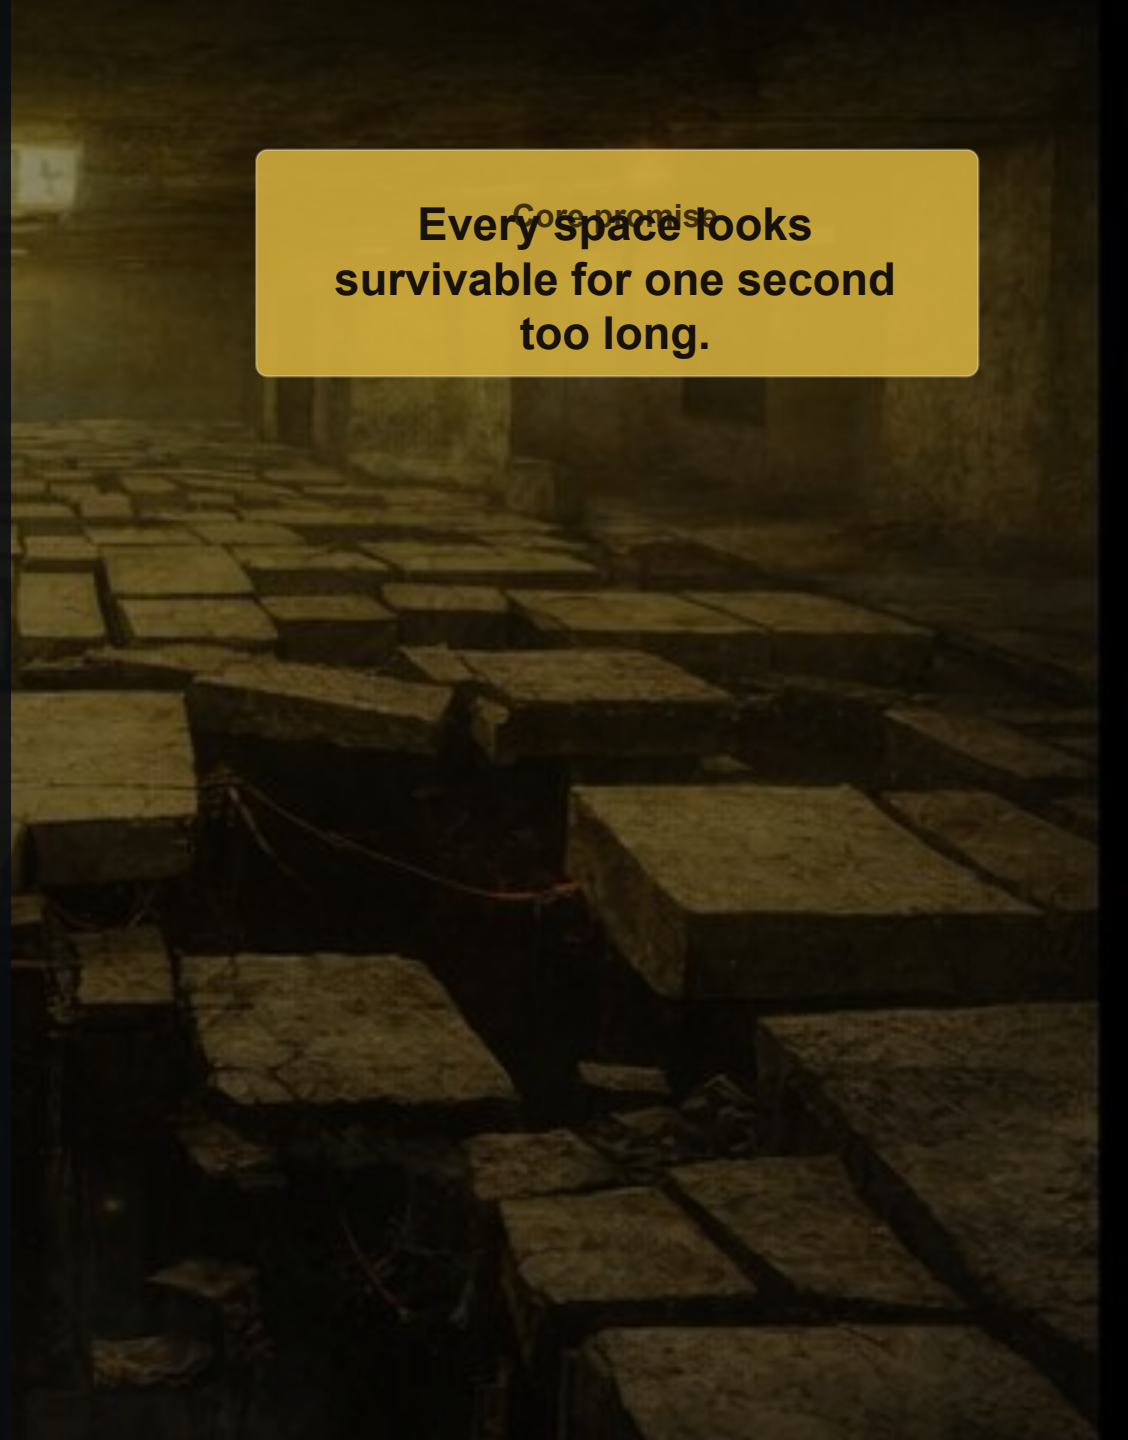
Level 1 tests fast reactions. Level 2 tests trust, timing, and path reading.

STYLE DIRECTION

Visual & audio language

The game should feel like a place that almost makes sense - until it turns hostile.

- Visuals: fluorescent reds and sickly yellows, long corridors, dirty concrete, distant exit signs
- Audio: HVAC hum, alarms, metallic impacts, creature shrieks, sudden drops into silence
- Emotional goal: claustrophobia, distrust, brief relief, then panic again



Core promise

Every space looks survivable for one second too long.

PROTOTYPE SCOPE

A focused Unreal vertical slice can prove the idea quickly.

MVP features

- One chase maze level
- One breaking-floor level
- One pursuing monster behavior
- Fake-exit logic + restart loop

Why it is strong for a prototype

- Clear core fantasy: survive the impossible escape
- Readable design pillars that map directly to mechanics
- Short playtime but high tension and memorable moments
- Buildable with Unreal blueprints and modular level pieces

False Exit is designed to be small, intense, and visually distinctive - a horror prototype that communicates its idea in minutes.
